## Practica #2

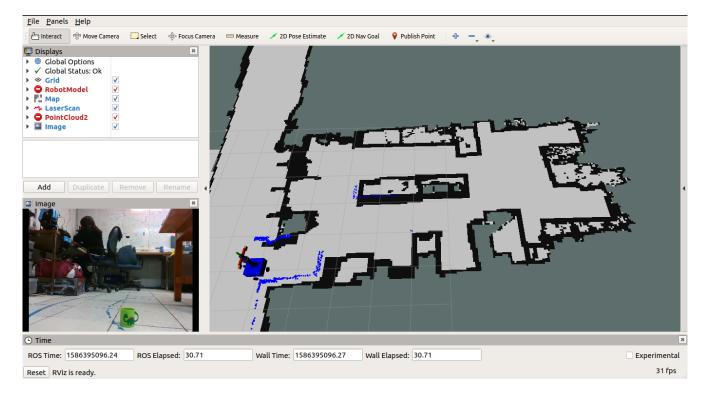

Como se ve la simulación después que se corre el comando roslaunch bring\_up robotino\_simul.launch

Modificando el archivo robotino\_simul.launch

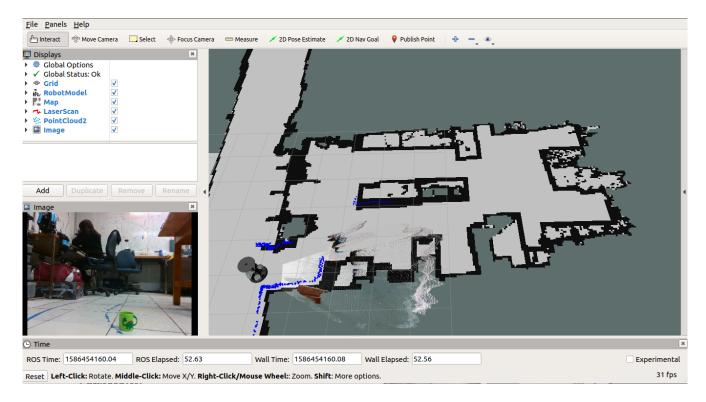

## Cambia la geometría del robot al cambiar robotino.urdf por justina\_simple.urdf

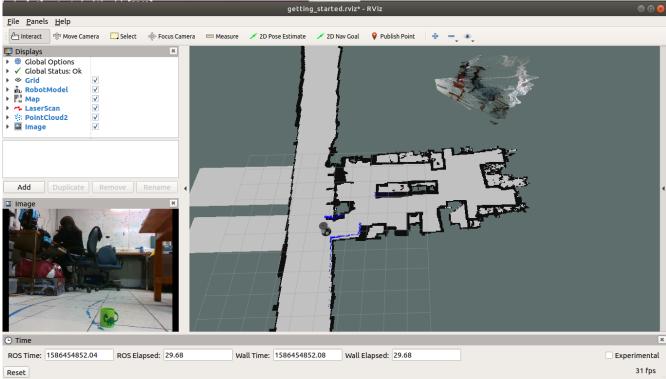

Cambia el mapa al cambiar Universum por Biorobotica

• Regresando a Robotino y modificando las lineas 114 y 121, robotino.urdf

Antes del cambio

Después de cambiar las lineas de código

Se mueve la posición de la cámara a las coordenadas (5 5 5.25) pero el robot mantiene su posición original

• En este paso se eliminó una de las etiquetas joint del origen de la cámara

```
